PROFESSIONAL SUMMARY

Senior Full-Stack Software Engineer with 5+ years of enterprise experience building scalable, cloud-native systems on .NET Core, Angular, and Microsoft Azure. Specializes in event-driven microservices, REST APIs, and event-driven workflows, with deployments orchestrated on AKS via Azure DevOps CI/CD pipelines. Hands-on with Azure Service Bus, Azure Functions, Cosmos DB, and API Management. Experienced in JWT/OAuth authentication and emerging RAG-based AI integrations. Consistently operates at the intersection of backend depth and cloud-native architecture, delivering systems that are resilient, observable, and built to scale.

EXPERIENCE

Information Technology Analyst

Tata Consultancy Services — Frederick, Maryland, United States

August 2025 - Present

- Architect and lead development of cloud-native enterprise applications on Azure, owning end-to-end delivery of full-stack solutions built on .NET Core and Angular.
- Design distributed microservices architecture with asynchronous messaging over Azure Service Bus, ensuring loose coupling, fault tolerance, and horizontal scalability across services.
- Own deployment infrastructure on AKS, managing containerized workloads, resource configurations, and zero-downtime rollouts through Azure DevOps CI/CD pipelines.
- Drive RAG-based AI integrations using LLaMA and DeepSeek, enabling intelligent document retrieval and context-aware responses within enterprise workflows.
- Define and enforce API contracts through Azure API Management, implementing rate limiting, versioning, and security policies across internal and external-facing services.
- Partner with architects, product managers, and client stakeholders to translate complex business requirements into scalable, maintainable system designs.
- Establish engineering standards around observability, error handling, and service resilience, contributing to production systems with high availability requirements.

System Engineer

Tata Consultancy Services — Redhill, England, United Kingdom

April 2023 - July 2025

- Built and maintained scalable .NET Core backend services including REST APIs, background job processors, and event-driven workflows using Azure Functions and Service Bus.
- Implemented OAuth 2.0 and JWT-based authentication systems, securing access across multiple enterprise client applications with role-based authorization.
- Developed and optimized Azure SQL and Cosmos DB data models, handling both relational and document-based storage requirements for high-throughput services.
- Contributed to Angular frontends for enterprise clients, building reusable component libraries and integrating REST APIs into responsive, maintainable UIs.
- Participated in design discussions and contributed to technical documentation, helping the team maintain clarity on service contracts and integration patterns.
- Wrote and maintained unit and integration tests, improving code coverage and reducing regression incidents across critical backend services.

Assistant System Engineer

Tata Consultancy Services — Bengaluru, Karnataka, India

September 2020 - March 2023

- Contributed to .NET Core backend development, implementing REST API endpoints and supporting third-party service integrations.
- Assisted in analysing functional requirements and translating them into technical specifications and low-level design documents.
- Wrote unit tests using NUnit and Moq to validate business logic and ensure reliability of newly developed features.
- Supported bug triage and defect resolution across development and UAT environments, working closely with QA teams to reproduce and fix issues.
- Gained working knowledge of Azure cloud services and enterprise application workflows, including deployments and environment configuration.
- Participated in code reviews and agile ceremonies, developing strong engineering fundamentals within a structured, large-scale delivery environment.

Android Developer Intern

LOG Security Solutions — T-Hub, Hyderabad, India

December 2018 - May 2019

- Built an Android application centred around real-time location features, integrating Google Maps API and Android Location APIs for live user tracking.
- Implemented mutual location sharing so users could view each other's live positions, with support for saving and managing named locations within the app.
- Analysed product requirements with the founding team, contributed to feature scoping, and wrote basic unit tests to validate core location logic.

TECHNICAL SKILLS

Backend	.NET Core, C#, REST APIs, Background Workers, Azure Functions, Microservices
Frontend	Angular, TypeScript, HTML, CSS
Cloud & DevOps	Microsoft Azure, AKS, Kubernetes, Docker, Azure DevOps, CI/CD Pipelines
Azure Services	Azure Service Bus, Azure Functions, Azure API Management, Azure SQL, Cosmos DB
AI / ML	RAG (Retrieval-Augmented Generation), LLaMA 3.2, DeepSeek, Vector Search
Auth & Security	JWT, OAuth 2.0
Other	Android Development, Google Maps API, Git

EDUCATION

Rajiv Gandhi University of Knowledge Technologies, RK Valley

Bachelor of Technology, Computer Science

2016 - September 2020

CERTIFICATIONS

Microsoft Certified: Azure Developer Associate [\[Credential\]](#)

Issued by Microsoft

GitHub Copilot [\[Credential\]](#)

Issued by Microsoft

Microsoft Certified: Azure Fundamentals [\[Credential\]](#)

Issued by Microsoft
